Subject Please make Pennsylvania provide Dimock families with longterm water replacement

Would you want your children drinking water with dangerous levels of methane and toxic chemicals as those poor families in Dimock are?

I undersand the Pennsylvania Department of Environmental Protection allowed Cabot to stop making deliveries to replace the Dimock water it contaminated on Nov. 30, 2011. Now, EPA is delivering water to only four out of the 11 families that need it. Those seven families not receiving water from EPA must pay for costly water deliveries out of their own pockets.

Please compel the State of Pennsylvania to provide long-term water replacement for the Dimock residents.
